

Free Standing Plinths

Our free standing mounting plinths (floor protector) and walkways are an ideal option to use where you can't fix to the floor, such as listed buildings and under floor heating.

They greatly reduce installation time and costs of civil works as there is no need to dig costly containment channels in the floor for all the cabling. Installation on plinths gives customers the flexibility to easily relocate the lanes in the event that building reorganisation.

The standard anti-slip floor covering is black, please refer to our colour chart for different colour options.

SURFACE MOUNTED PLINTHS

DESIGN

The sloped walkways are designed to meet the requirements of BS8300:2009 Design of an accessible and inclusive built environment.

The modular construction offers quick and easy assembly of the plinths which interlock with each other and bolt together providing a heavy and robust surface to bolt the cabinets to.

The main supporting cross sections under the walkway are manufactured from 15mm laser cut mild steel sheets.

The cabinet plinths are manufactured in two parts, the top part is 10mm thick and the second is 15mm both laser cut mild steel sheets.

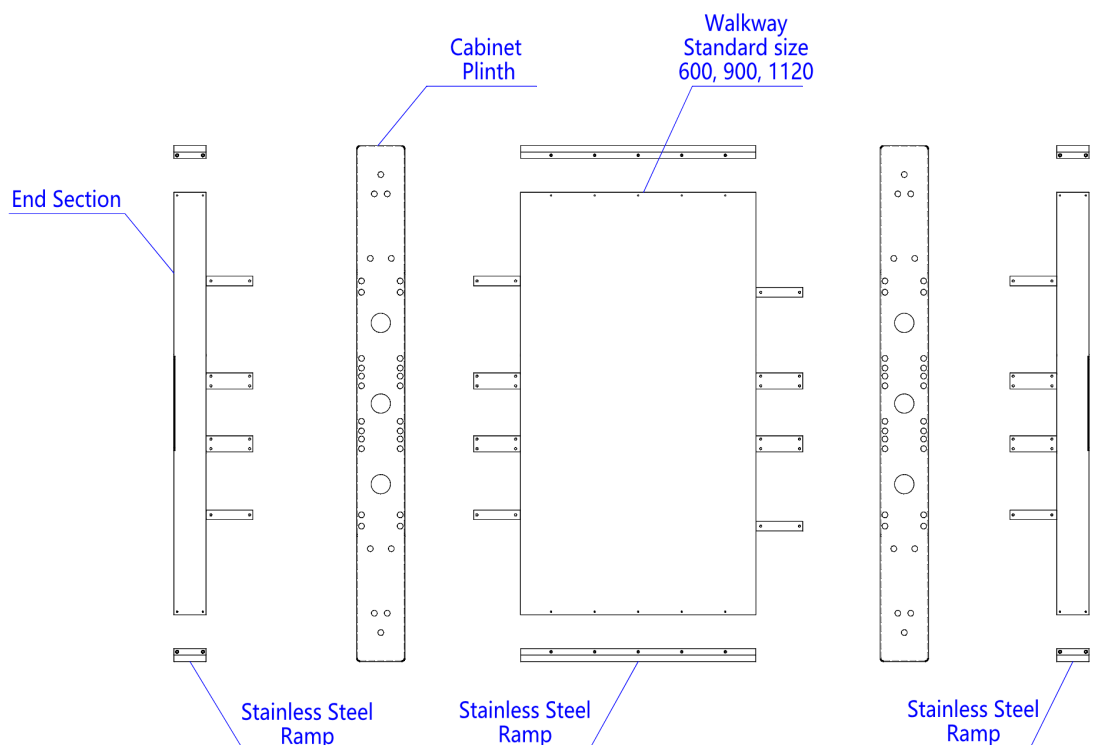

The walkways are manufactured from 2mm painted mild steel sheet with Altro anti slip floor covering applied.

The plinths provide three separate containment channels:-

- 2 x H18 x W180mm.
- 1 x H18 x W90mm.

The optional end sections can be custom made to suit site requirement and have upturns so that it can be attached to the wall to improve rigidity. Alternatively for larger gap over 100mm you can use the glass mounting plinths.

Maximum high of obstacle for free standing is 1.2m, if bolted down 1.7m.

GLASS PLINTHS

Our free standing glass plinths can be used to fill any gaps and has a cable route through the middle.

FLOOR COVERING

The standard Altro Walkway 20 anti-slip floor covering is black, but there are many different colours to choose from.
